

Intermediate STEMbotics Workshop

Intermediate STEMbotics Workshop

All Hyett Education staff have clear Enhanced DBS checks and it is our policy to have our certificate and ID with us for every visit in schools.

If you require any further documentation from us prior to the visit, please ensure requests are made 5 business days prior to the day of delivery.

Robotics Room Setup Examples

We require the room to be set up ready for our arrival, with a double-space table or two connected exam tables available for each team. We'll need a screen/projector for modelling but can provide our own if requested in advance.

This example is in a school hall, with exam tables paired for each team. A U-shape setup allows space for us to present from the front, and leaves room for the challenge mats in the middle. The mats shown are 1.5m x 3.5m each.

This example shows the setup using mobile dining tables. Again, set up in a U-shape leaving space in the centre of the room for our coding challenge mats. Typically, 3 teams can fit on one mobile dining table.
